Dental Sealants for Sunny Smiles

UNSEALED TOOTH

SEALED TOOTH

What is a dental sealant?
A sealant is a thin plastic coating that protects the chewing surfaces of teeth from cavities.

When should teeth be sealed?
A sealant should be placed as soon as the permanent tooth appears in the mouth, usually around 5-6 years old, or as soon as possible.

How are dental sealants applied? After the tooth is cleaned, the sealant is painted into the grooves of the back teeth. A special light is used to help the sealant harden.

How long do sealants last?
Sealants will usually last about five years or longer. Sealants should be checked once a year and replaced if needed.

Selladores Dentales para Sonrisas Soleadas

DIENTE NO SELLADO

DIENTE SELLADO

¿Qué es un sellador dental?

Un sellador dental es una capa delgada de plástico que protege la superficie masticadora de los dientes contra las caries.

¿Cuándo se deben sellar los dientes?

El sellador debe ser aplicado tan pronto el diente permanente aparece en la boca, usualmente cerca de los cinco o seis años de edad o tan pronto sea posible.

¿Cómo son aplicados los selladores dentales?

Después de limpiar el diente, el sellador se aplica en la superficie masticadora de las muelas.

¿Cuánto duran los selladores dentales?

Los selladores usualmente duran alrededor de cinco años o más.
