2015-2016 Ryan White Satisfaction Survey

U.S. Department of Health and Human Services, Health Resources and Services Administration, HIV/AIDS Bureau’s vision is “Optimal HIV/AIDS care and treatment for all”. The Area 12 (Volusia and Flagler counties) Ryan White Program (RW) embraces this vision for its HIV positive consumers. To attain this vision, key program principles expect that consumers receive respectful, culturally sensitive services, from knowledgeable staff, who understand that optimal service is individualized and person centered. Area 12 RW collects data on those served through a variety of devices including a client survey that gauges client perceptions on such subjects as: the intelligibility of services and information; the knowledge and respectfulness of the provider; and the inclusion of consumers in their care.

The 2015-2016 Satisfaction Survey was conducted between April 2015 and January 2016. Five hundred and Twenty-six (526), practicable responses were received. The new survey paradigm*, that began during the 2014-2015 grant period, distributed redesigned survey tools to all providers with a Ryan White Contract or MOA. The new tool was more literacy friendly, using colors to delineate positive and negative responses (green to yellow to red respectively), with increased white space and reduced survey length. Providers were instructed that:

• Clients who received services must be afforded the opportunity to rate and comment on the service they received that day.
• Respondents be given the option to complete the survey in private or receive assistance from staff.
• All surveys were anonymous and should be collected discretely.
• Surveys should be submitted to the Lead Agency with regular invoice packets.

The shift to the survey paradigm resulted from the Area 12 Ryan White Program’s continued movement toward greater alignment with national and consortia directives of person (patient) centered care such as:

• Greater consumer understanding of and inclusion in the care process
• Quicker recognition and resolution of consumer issues and
• Alignment of consumer input demographics with program demographics.

* This paradigm shift will affect certain year over year comparisons to years prior to 2014-2015, as it allowed each client multiple opportunities to assess services.
2015-2016 Ryan White Satisfaction Survey

Results of the 2015-2016 survey signal progress toward person centered care. Consumers are experiencing the benefits of increased inclusion and health literacy practices aimed at better understanding. This is revealed in the noticeable departure from comments simply expressing general overall praise.

- “Very kind and compassionate the interview was thorough, but not burdensome. I left with no questions or concerns.”
- “… So comforting and gave a lot of information that was helpful to me and I could honestly say I was very nervous coming in... everything so eye opening...”
- “I couldn't have asked for more. The services help me to cope with my disease.”
- “I feel comfortable and my language and good service.”
- “…not only helpful but very non-judgmental through the whole process so far.”
- “Very helpful & quick. Gave me a few options on paperwork and dates. Provided info on what's covered, dental assistance and additional info on what Ryan White funding helps with and how to get the extra assistance I need that I wasn't aware I could get.”
- “They called to check on me to see how I was feeling and doing. Great!” (Peers)
- “The staff and Dr. are very helpful, studious and understanding.” (Doctor)

(Over 84% of comments were for Case Management.)

The conclusion that providers have taken advantage of the new paradigm’s ready access to consumer input to identify and address consumer issues in a timelier manner is supported by the reduction of adverse system wide comments from 10% to 2% over the last year. Overall success of the Ryan White Program, as judged by its consumers, resulted in a 92% or higher rating for all central services with most service categories receiving 98% or higher.

The elimination of barriers inherent in a mailed survey was a main goal of the survey process. The paradigm shift continues to answer the historic respondent/program parity issues of inequality between service demographics and respondent demographics. The participation of race/ethnicity, age and gender continue to be in alignment with local service demographics.

The second year of the new model sustained the growth in consumer responses (roughly 200 additional). Increased electronic scoring helped resolve resulting capacity issues. Providers that offered more than one service received instruction to reduce their number of invalid surveys. This resulted in an increased Peer response rate of 96% for 2015-2016. However, there is still room for improvement. The majority of invalid responses system wide were still a result of multiple service categories being rated on a single survey form and non-participation by individual providers must be addressed.

The Area 12 Ryan White Program has been successful in providing service in a professional, respectful, consumer inclusive manner that resulted in the overwhelming satisfaction of those served.
